

Dear Concerned Citizen,

Thank you for your continued interest in the North Glade Run Stormwater Assessment. Below please find the July update on the North Glade Run Stormwater Assessment for your knowledge. If you have any questions or concerns, please feel free to contact me.

July Update

Overview

Garrett County retained A. Morton Thomas and Associates, Inc. (AMT) to conduct a stormwater assessment for the North Glade Run (NGR) watershed. One of the goals of the Deep Creek Watershed Management Plan is to “manage stormwater infrastructure to decrease pollution from existing and proposed development to ensure healthy watershed conditions”. With that in mind, the goal of this project is to identify areas of the watershed that exhibit stormwater problems and to create an action plan to address the issues and prioritize its implementation.

July Activities

- AMT is completing the hydrologic & hydraulic (H & H) models for subwatersheds of interest.
- AMT has delineated subwatersheds within North Glade Run and ranked them based on subwatershed characteristics and citizen input.
- AMT is drafting a technical memorandum documenting the analyses performed for selection of potential project sites, watershed characteristics evaluated, selection and weighting of ranking criteria, and project prioritization.
- AMT is 90% complete with field assessments and took field measurements for development of hydrologic & hydraulic (H&H) models at potential project sites.

Action Items for the Next Month

- Complete field assessments and finalize H&H models
- The County technical team will review the draft models and documentation.
- AMT has a meeting scheduled with the County technical team to review progress thus far.
- AMT will examine the top ranked subwatersheds for potential site specific remediation projects.
- Develop concept recommendations and graphics.

Reminder: The county has posted all email updates to the project website, which can be found at <https://www.garrettcounty.org/planning-land-development/north-glade-run-stormwater-assessment/monthly-updates>.

Sincerely,

Deborah A. Carpenter, AICP
